

OPTIONAL EXTRAS - Cable Drum Trailers

DRUM DRIVE / POWER LIFT UNITS

Diesel or Petrol engine Powered Cable Drum drive unit to assist in paying out or taking up the cable. This unit also provides powered lift of the drum.

Optional variations include units powered direct from vehicle P.T.O hydraulics (Consult S.E.B.)

Note. Fitment of the drum drive reduces the payload of the trailer (Consult SEB).

ADJUSTABLE HEIGHT DRAWBAR

For auto reverse overrun braked Trailers. A useful acquisition where a variety of vehicles with different tow heights can be used to tow the same trailer.

EXTENSION SLIDE

Makes the trailer more versatile, enabling it to handle smaller diameter drums. Slides can be supplied loose or mounted on the trailer chassis.

Note:

- a) Capacity of Extension Slides are limited to 25% of trailer rated payload.
- b) Fitment will reduce the width of drum space available. (Consult S.E.B.)

DRUM BRAKE

Mechanical or hydraulic friction brake for overhead stringing operations or other applications where tension is to be maintained on the cable.

Note: fitment of the brake device will reduce the width of the drum space available. (Consult SEB)

Full details of any of the above can be supplied to match the particular trailer you require.
