Technical Data

The POLIM-S surge arresters are designed and tested according to IEC 60099-4 : 2004

- For system voltages up to	36 kV rms	- Long duration current impulse	1000 A / 2000 μs
- Nominal discharge current I_n 8/20 μs	10 kA pk	- Energy capability, 2 impulses	9.0 kJ / kV of U_c
- High current impulse I_{hc} 4/10 μs	100 kA pk	- Energy input with I_{hc}	3.6 kJ / kV of U_c
- Short circuit rating I_s 50 Hz	50 kA rms for 0.2s	- Power frequency up to	62 Hz
- Line discharge class according to IEC 60099-4	3	- Cantilever strength 'MPSL'	4000 Nm
- Classification according to IEEE (ANSI) C62.11	station class	- Torsional strength	100 Nm
- Service conditions:		- Vertical load	3000 N
- temperature (1)	- 60°C up to + 45°C		
- altitude (2)	up to 1800 m		

(1) These values exceed IEC requirements. For installations in higher ambient temperatures, please contact the manufacturer.

(2) This value exceeds IEC requirements. For installations in higher altitudes, please contact the manufacturer.

Application

Protection of medium voltage AC networks against both, multiple atmospheric and switching overvoltages as well as Very Fast Transients (VFT). Suitable for the protection of transformers, transformers in arc furnace applications, cables, generators, parallel to capacitor banks, and railway vehicles. Can be used mechanically as support insulator or as suspension insulator in case of application as line arrester. For indoor and outdoor installation.

Advantages

- Low residual voltage
- Long protection distance
- High energy absorption capacity
- Maintenance free
- Stable U-I characteristics even after multiple strokes
- Proof against ageing
- Explosion and shatter-resistant design
- Stable against shock and vibrations
- Pollution resistant and UV-stable
- Housing resistant to rough handling
- Stable against shock and vibration
- High mechanical resistance

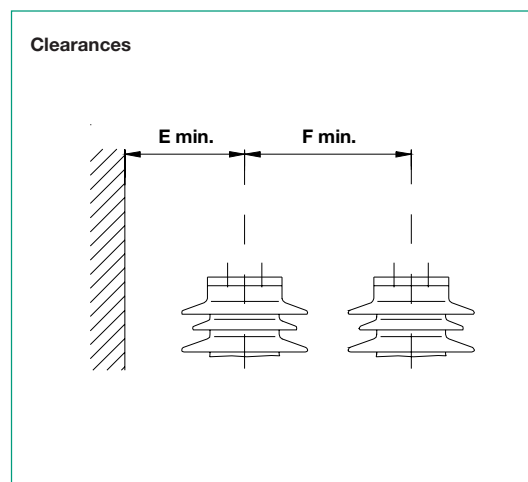

Electrical Data for POLIM-S

Temporary Overvoltage Capability (TOV) - Power Frequency versus Time Characteristic

- POLIM-S during 1 second (a: $1.437 \times U_c$ or b: $1.375 \times U_c$)
- POLIM-S during 3 seconds (a: $1.410 \times U_c$ or b: $1.341 \times U_c$)
- POLIM-S during 10 seconds (a: $1.366 \times U_c$ or b: $1.310 \times U_c$)
- a: value tested with a sample that has not been prestressed by any energy input.
- b: value tested with a sample that has been prestressed with a prior energy input according to the operating duty test
- The values have been determined with a test sample preheated at 60 deg. Celsius acc. to IEC 60099-4 and refer to an ambient temp. up to 45 deg. Celsius
