

# Cable Ease

## CABLE BLOWING LUBRICANT

- Clear liquid lubricant containing silicone specifically designed for electrical and telecommunication cable placement operations using blowing and air carrying techniques
- Easy application that provides superior friction reduction
- Does not dry out during installation or interrupt the flow or carrying capability of the air
- Maximizes installation distances – atomizes when blown, allowing air flow to carry the lubricant over longer distances
- Low surface tension ensures an easy flow without drops or lumps, overcoming accumulation problems encountered when using thick gel-based or wax lubricants
- Spreads through the duct or sub-duct, leaving a thin film of lubricant which will not 'cement' the cable, facilitating easy removal or subsequent installations at a later date
- Compatible with all standard cable jackets, duct and innerduct polymers
- Suitable for use on fibre optic cable blowing operations
- Ideal for pre-lubricating ducts using sponge blowing techniques
- Suitable for use at extreme temperatures
- Non flammable – no issues with transport, storage and logistics
