**Re.:** CableSafe hooks

Dear Sirs,

For a few years now (since 2003), Keppel Verolme BV is using the CableSafe hooks for support of cables and hoses, during the execution of repair- and modification works on board of ships and offshore vessels.

Since the introduction, the use of the CableSafe hooks lead to a decrease of the trip hazards and promotion of good house keeping on many projects. The workforce does not have to improvise in organizing the cables and hoses in a clear manner. Walkways, ladders and stairs on board are free of obstacles, which is an advantage in reducing slips, trips and falls during the work on board.

The CableSafe hooks are provided on "strategic" locations on the project, near gas and oxygen manifolds, air supply manifolds, electrical supply stations and at the entrance of confined spaces. Cables and hoses are easily to be identified which is an additional advantage. Our clients were also satisfied with the use of CableSafe hooks during the execution of the repair works onboard.

Keppel Verolme has used the CableSafe hooks at the following projects:

- GSF Arctic III
- GSF Monarch
- Allseas Solitaire
- AFY Enchantment of the Seas
- Transocean Prospect

Yours faithfully,  
Keppel Verolme BV

A. van Bergen Bravenboer  
Purchase Manager

Orders are only accepted on base of the general yardconditions as mentioned on the reverse side, except when previously agreed otherwise.
